Amstrad to launch new PCW machine

AMSTRAD is to launch its fifth microcomputer next month – an expanded version of the PCW 8256.

The new PCW is self-explanatorily named the PCW 8512. It will essentially be the same as the 8256 but with an extra 256K of Ram. It should, therefore, be entirely upwardly compatible with the existing model.

However, Amstrad is not

expected to drop the successful PCW 8256, as it did with the CPC 664 when the 6128 appeared. The two will both be available and supported, although there will inevitably be a gradual phasing towards the larger memory version.

Nor does the 8256 look set for a price cut on the introduction of the 8512. The new

JEFF Minter's Atari 520ST Colourspace exploits the machine's hires and colour capabilities. Compatible with the design package NeoChrome, it will be available next month.

THIS WEEK'S NEWS

- Musical bundles for the Commodore 64
- New charity tape from War on Want
- Sinclair sells pocket TV rights to Timex

ARIOLASOFT is to release the Degas graphics program for the Atari ST – licensed from US firm Batteries Included.

The program allows for the creation of detailed graphic designs.

A wide variety of brush styles are available and text may be added to the screen in a variety of fonts – a font editor program is included.

Images may be copied or

redrawn to any section of the screen and may be overlaid so that the background design is still visible.

Degas will work in any of the ST modes with 500 colours in the lowest. The program is entirely mouse-controlled and runs under the TOS operating system.

Degas will be released by Ariolasoft in February. A price has not yet been set.

EDITORIAL

The phenomenal success of *Soft Aid* has spawned two new aspects to the software industry: the appeal of compilation tapes, and, rather more altruistically, the potential for fundraising through software. In addition to *Soft Aid's* successor *Off the Hook*, War on Want is now planning a charity tape to be released in April. Two things can now happen. Either *Soft Aid* has increased people's awareness of how they can directly help others, and the two new projects will be a deserved success, or they will feel they have already 'done their bit'.

Certainly neither of the latest projects has the hard-hitting emotional appeal of the Ethiopian famine, with its attendant horrific pictures on TV and in the press. Nor do they have the publicity that Bob Geldof, Band Aid and Live Aid achieved when virtually the whole population

aged 40 or under felt directly involved with the efforts.

Drug abuse the subject of *Off the Hook*, are much misunderstood - the aim of *Off the Hook* needs much more expansion and clarification than *Soft Aid*. Its organiser Rod Cousens knows it won't top the £350,000 raised for *Soft Aid*. War on Want's tape's proceeds will go to its general funds and the charity simply wants to spread its own message to a potentially different audience.

Can these two waken people's consciences the same way? Software companies, and satellite industries, such as duplicators, have been consistently generous in donating programs, and services for charity tapes, and it is up to the computing public to follow that lead.

Anyone who can afford to buy software can afford to help those who can barely survive, whether through famine or drug addiction.

Musical bundles for the Commodore 64

NEW bundling deals on the Commodore 64 have been announced by Commodore and Music Sales.

One package offers the Commodore 64, C2N data recorder, Music Sales' *Sound Expander* module and software, a full-size five octave

keyboard, and two pieces of software, *Music Maker 2* and *Sound Studio*. This pack will cost just £289. Bought separately, these products would total over £400 in price.

Music Maker 2 is the new version of *Music Maker*, a beginners' guide to writing music, it uses a menu/windows style of screen presentation.

The second 'bundle' is for existing Commodore 64 owners, and comprises the music hardware and software listed above, for £149.99.

"The *Music Sales* products from Commodore will still be sold on their own, but obviously the price is not so attractive," said Gabriel Butler of Music Sales.

The new packages should be on sale by the beginning of March, in both specialist music shops and some high street stores.

Music Sales is also working on a composer package to complement the *Sound Expander* module. It will enable users to lay down up to eight tracks, with notation shown on screen and a print out facility.

Activision goes on to 16-bit

GOOD news for games-starved Atari ST owners. Activision, one of the leading entertainment software companies, has announced it will be releasing 16-bit software in the UK.

This follows the launch of a number of 16-bit titles by Activision US at last month's CES.

Versions of its Commodore 64 programs *Hacker*, *Mindshadow* and *Music Studio* have been enhanced and converted to the Atari 520ST and Commodore Amiga. The first two will also be available for the Apple Macintosh.

Activision UK's managing director Hugh Rees-Parnall hopes that ST versions of *Hacker* and *Mindshadow* will be available this month, with Amiga versions available as soon as the machine is launched in the UK. Availability on the Mac has yet to be decided.

The two adventures will each cost £24.95, and *Music Studio* £29.95.

Amstrad PCW 8512

◀ Continued from page 1

machine will cost £100 more; around £560 (£469 plus VAT).

Malcolm Miller of Amstrad commented, "I have no details about this at the moment. When the machine is available, there'll be more details then."

The PCW 8512 is only one of Amstrad's planned launches this year. Its 16-bit business micro targeted firmly at the IBM-PC market (see *Popular Computing Weekly*, December 5, 1985), now appears to be scheduled for launch in the late summer.

both estimate that Sinclair retained its market leadership of the UK market. AGB gives Sinclair a figure of 37% of total home computer sales while Wood Mackenzie's figure is 35%.

Sinclair's TV rights sold to Timex

SINCLAIR has sold all marketing and distribution rights in its flat screen TV to Timex, which has manufactured the pocket television in Dundee since its launch.

This means that although the TV will retain Sinclair's name, the company will not have much involvement in the product. The income gained from the deal will help the company considerably, since it is still slowly recovering from the financial crisis of last summer.

However, Sinclair will continue with research and development in flat screen technology at its Cambridge headquarters. It is still hoped to use a derivative of the flat screen in Sinclair's portable computer.

"Flat screen technology was always intended to be used in Sinclair's computers,

as indeed is the wafer scale research," commented a Sinclair spokesman. "Odd products - that is, those that are not part of the original long term

plan - can then always be released from that research. The pocket TV was one such opportunity."

Timex has a number of projects planned for the TV, including a version for export with both UHF and VHF facilities. It has also announced a price cut - from £99.95 to £79.95.

Sinclair retains clear market lead in 1985

TWO surveys of the home micro market, announced last week, have produced startlingly different analyses of hardware performances in 1985.

The reports, from market researcher AGB, and stockbroker Wood Mackenzie,

Further down the list, things differ. AGB places Commodore second with just over half Sinclair's percentage. Wood Mackenzie places Amstrad second with 23%, and Acorn third with 18%, with Commodore fourth. AGB places Acorn third and Amstrad fourth.

The differences in opinion may partly be explained by the fact that both Commodore and Acorn were selling machines in large quantities for well under £100. Commodore get rid of large stocks of the Plus/4 and C16 in this way, while Dixons took on 150,000 Acorn Electronics to sell before Christmas. The high sales of these machines has distorted the market to a certain extent.

Additionally, Wood Mackenzie included Amstrad's PCW 8256 as a home computer in its research. It is not clear whether AGB counted PCW sales in its report.

A third report, from IDC, which has been out for some months, but contains forecasts up to 1990, shares AGB's view, that Commodore is a consistent second to Sinclair in the UK market.

Wood Mackenzie has also published forecasts for the home computer market in the next two years.

While it estimates that unit sales of micros in 1985 fell by nearly 17% to 1.1 million, and that 1986 sales will be around the 750,000 mark, it says the value of the market will increase from £226 million to around £262 million, because of the higher prices of newer micros, such as the Atari 520ST, Amiga, C128 and Amstrad's machines.

It also intriguingly predicts a re-emergence of the MSX standard in 1987, with the next generation of the Japanese built computers, to be used exclusively in the home.

Spectrum Plus - still the leader

Multi-micro networks out for ST and 6128

TWO powerful hardware networks have recently been launched, one using the Atari 520ST, the other the Amstrad CPC 6128.

Northern Computers has now demonstrated its Amstrad 6128 hooked up to a network driving a 20M hard disc and Canon laser printer at two UK shows. This network supports unlimited numbers of machines across any distance. This is achieved by making all network interfaces intelligent so that no central file servers are needed.

It is also capable of connecting the Amstrads to BBC Bs, Apricots, Apples and IBM PCs.

However, the cost is upwards of £150 per machine on the network. The 20M hard disc costs around £1,000.

Atarinet is the Atari 520ST network, supplied by Liverpool company Software

Punch. It offers similar capabilities to the Amstrad network, but incorporates the attractions of the Gem interfaces, which allows full icon control of all features. It can support 250 users on one net, and five users can act as bridges to other networks. It also features multi-tasking for system management, electronic mail and print spooling. Software Punch also supplies its own hard disc - a 10M version for £960 and a 20M version with a 20M tape streamer for £1,180.

Kempston mouse becomes an objet d'art

THE Art Studio from OPC is now also available as a package comprising Kempston's new Spectrum mouse and interface, and the program. Kempston's mouse is not, initially, being offered as a stand-alone product.

The two together will cost £89.98, the normal Art Studio price.

Commodore - will it file for Chapter 11

SPECULATION that Commodore International may file under the US's Chapter 11 ruling were rife last week. Commodore's loan agreement with its bankers expired on Friday, but Commodore says its bankers have extended the deadline through this month.

Chapter 11 forms part of the US's bankruptcy rules. It affords a company protection from its creditors - with a time limit - while a rescue plan is put together. Companies can continue to trade almost normally while under the ruling, if that is deemed the best way of regaining profitability.

Late last year, Commodore executives said that the company was not considering filing under Chapter 11. However, Egil Juliusen, president of American analyst Future Computing, now says, "If the bank calls in the deadline, then they have no

choice but to file for Chapter 11. Although the US rules are reasonable, the problem is one of perception with customers and dealers. Even if they do file, they still have plenty of time to reorganise - it would be a big blow, but not the end of the world.

"I'd guess it would be about 50/50 whether they file or not."

However, Juliusen predicts that Commodore could sell around 20,000 Amigas per month in the US in 1986. "The average price for the system seems to be around \$2000," he said. "That works out at about \$500 million this year in revenue - but will they have enough time? It all depends on the banks."

Commodore has said that Chapter 11 speculation is "completely ill-founded".

Just a myth

The idea that CP/M software is expensive ("Just the icing", Vol No3) is a myth. Whilst admitting that commercially produced software such as *Wordstar* is expensive, there is a large base of public domain software available which is very cheap, typically around £2.00 per disc. Obviously the number of programs on each disc depend on the size of individual programs.

I agree that the Amstrad is limited to 39.5K of Ram to run CP/M. But the Einstein has a full 64K and can, therefore, take full advantage of all CP/M programs available.

Comprehensive

To balance the scales, I am writing in defence of Incentive's program *Graphic Adventure Creator* in response to the letters from Kevin Marks (Vol 5 No 2) and T Corby (Vol 5 No 4).

Referring to T Corby's letter, I am not sure what is meant by changing the map during play. It is certainly possible to alter the location during play in response to conditions. A further comment on the letter is that if it is found that *GAC* is so unsatisfactory, what other utility is used and how much does it cost?

I have found *GAC* very comprehensive, it also includes a form of compiler so that your final adventure can be saved as binary file - all things considered, I think good value for money.

Having said this, I do have

SPECIAL OFFER

This is the last coupon to collect for our special Firebird/Arcade Champion's Guide offer. It's also the second coupon you need for the cassette label offer.

COUPON
5

one complaint and that is the inadequate documentation. For example, it does not clearly explain how to randomize the location of objects (so that each game is different), or point out that connections defined in Room Description takes precedent over any other conditions given, or how to pick up objects dropped in locations different from where they started. All these things are possible, but it takes some 'playing around' to find out how to do it.

I think that the problem here, as with a lot of programs, is that the documentation is written by someone who has been closely involved with the program for may be a year or more, and tends to take for granted things which a complete newcomer does not at first appreciate.

My own policy when writing instructions is to assume that I am writing for a moron; usually the instructions then turn out about right.

However, despite this criticism I feel that Incentive have produced a very powerful and useable utility.

Error traps

I am writing in reference to Nigel Mossman's Error Trap program in issue 2 (9-15 January 1986). He stated that errors generated by Interface One cannot be trapped. Well, it is actually possible to trap all the errors generated by IF1 and I have used the following method successfully in writing the AMX Control Basic extension program for the Spectrum AMX Mouse Package.

When the shadow system variables are installed, Bit 2 of the address 23734 tells the Shadow Room whether to return via the error vector (pointed to by ERR SP), or whether to continue and produce an error report, when an error is generated. If this bit is set, then the Shadow Rom will always return via the error vector. All you need to do is make sure that this bit is always set.

"Well, you can't all be right..."

If you write a small interrupt routine to continually set the bit, used with a routine which alters the error vector, then you can trap any error. There is one limitation with this method of trapping OF1 errors.

The means of obtaining the error code is lost during the jump to the error vector, so you can't find out what error Interface One had generated, although the code for an error generated by the 16K Rom can still be found as normal.

Automatic?

I should be grateful if you would answer the following question: Is there a program available for the Spectrum enabling the user automatically to renumber program lines after interpolations and alterations?

Leo Bennett
2 St Peters Row
Spring Lane
Thrupp
Stroud Glos

Many toolkit programs for the Spectrum will do the job you require. OCP's Toolkit package will certainly allow you to renumber lines, and is a fairly powerful program.

OCP can be contacted at 77a Packhorse Rd, Gerrards Cross, Bucks, SL9 8PQ (0735 662888).

QNET-2

I am writing to introduce QNET-2 to you. We are a group of QL owners who currently have three Gallery pages on Prestel. This was formed when Prestel decided to cut QNET on page *80040 off in its prime.

We provide a service of news, technical help, hints and tips and competitions. The pages are updated on a regular basis.

At present we have just under 70 members and membership is growing at about three or four a week.

The other two co-editors are Martyn Amess who lives in Battle (Mailbox number 042464813) and Alex Robertson who lives in Crewes (Mailbox number 919995118). As you can see we are spread throughout the country - one of the advantages of Prestel! QNET-2 can be found on Prestel pages *323000112, *323000037 and *323000223.

A reappraisal

May I use your letters page to let off steam about something on which I feel very strongly.

The main reason for writing in the QL. Do people truly realise what they are getting for their money? I wonder, because the Motorola 68008 is one hell of a piece of silicon and QDOS is pretty good too. The early release of the machine seems to have knocked the QL for six which is a shame as at £399 it was excellent value for money, at £199 it is untouchable.

I promise you that I am not another dyed-in-the-wool Sinclair addict, but of all the processors and operating systems I have worked with, the QL has given me the most pleasure, and it's made in England.

Surely a reappraisal is called for?

L W Tomlin
71 Telford Rd
New Southgate
London N11 2RL

Psion's Organiser goes on a diet

PSION has signed a new customising deal, worth about £100,000, for its Organiser pocket computer.

The Organiser is to be marketed by Nume, a Norwegian nutritional products company as a 'diet computer'. Users will enter personal data, such as height, age and weight into

the Organiser. The software will then calculate a planned diet programme over a specified period.

Gremlin gets down to business

GREMLIN Graphics, the company best known for its Monty games, is setting up a new label to publish utility programs.

The first title to appear under the Discovery label will be *PyraDev*, a programming development system on disc for Amstrad's CPC range.

PyraDev comprises five programs - a source file editor, Z80 macro assembler, a debug monitor and disassembler, 'disc-nurse' and a file management program.

PyraDev will cost £29.95, and should be available soon.

War on Want plans charity tape for spring release

A NEW charity tape is being planned by War on Want, the organisation which raises funds for the impoverished, particularly in the Third World.

War on Want has gained permission from Virgin to adapt its title *Now Games*, and the new compilation will

be called *WOW Games*. Companies which have already agreed to donate titles to the tape are Ocean, Firebird, Virgin, Artic, Quicksilver and PSS.

"I'm hoping to get ten games in total, and I am still talking to software companies," said Toby Robinson of War on Want. "The idea is to charge £10 for a ten-game tape, and sell it on mail order to begin with. After a couple of months, we hope to start selling through the shops."

WOW Games will initially be available only for the Spectrum, but if demand proves high, Commodore and Amstrad versions may be developed. Of the £10 paid for the tape, around 80p will go to administrative costs, and about £9.50 to War on Want. Release date is planned for April.

ZX Microfair beats the cold

DESPITE the cold and rain, people still crowded into the Royal Horticultural Hall for the 18th ZX Microfair last Saturday.

The day's main attractions included special discounts on the Spectrum Plus (£87.50), QL (£189.95), flat screen TV (£71.95) and software from Sinclair, but the largest crowds gathered round Cheetah's stand, where an impressive day-long demon-

stration of its Spectrum drum kit for the Spectrum was taking place.

On the software side, MikroGen, CRL, Silversoft, Delta 4, Hi-Soft, and OCP (demonstrating *Art Studio*) all took stands. Two games being shown for the first time were Realtime's *Star Strike II*, using 3D Elite-style graphics, and *3D Slime*, one of the best QL games on display, from newcomers Datalink.

Sideways Ram

Hardware 16K Ram Module Micro BBC B Price £22 Supplier Colin Terrell, 7B Essex Gardens, Hornchurch, Essex RM11 3EH.

There are literally hundreds of Rom software packages for the BBC. Unfortunately, the BBC computer is only provided with four sideways Rom sockets as standard. This has led to the development of Rom expansion boards, which allow the user to hold 16 Roms in the computer simultaneously. Despite this, the more affluent of you will still find that you possess more Roms than sockets. A solution to this problem is to purchase a sideways Ram unit, an inexpensive example of which has just been released by Colin Terrell.

The advantage of sideways Ram is that it can be written to. You can leave your most frequently used Roms in the machine and save the contents of your others as files on a disc. These Roms can then be removed from the computer, freeing several sockets. Whenever you wish to use the facilities provided by one of these Roms, you merely load the Rom image from disc into your sideways Ram module. It can then be used as if the Rom were present in the machine. Gone are the days when you had to lever Roms in and out of the machine every five minutes.

RAM module

- L - LOAD RAM
 - S - SAVE ROM
 - P - PROTECT RAM
 - V - VIEW ROMS
 - * - OS COMMAND
 - Q - QUIT
- Select option

Colin Terrell's 16K Ram module is the same length and width as a Rom but is slightly more than twice as deep. Fitting the device is simplicity itself, the module sits in any available sideways Rom socket. Next you connect a probe clip to pin 24 of IC73. Finally you fasten the write protect switch to the rear of the machine. If any of this sounds at all off-putting, don't worry, because a clear and concise set of fitting instructions is provided, and you needn't go anywhere near a soldering iron.

LOAD RAM

Which socket to LOAD 0-15 : 1

Set switch to **ROMH** position

then enter ROM filename : FORTH

The software is provided on disc, with the program a combination of Basic and assembly language. Should you wish to make any modifications to the program then you should encounter no problems as it is beautifully documented.

The software is menu driven and provides most of the utilities that you will require. It will display a list of the socket numbers and the Roms which they contain. Knowing the socket number of a particular Rom you can then save a copy of that Rom to disc. The next option will reverse this process and load a disc file into Ram. This is always performed with the write protect switch in the "write"

position. You are provided with a protect option to prompt you to flick the switch to its "protect" position and then press the Break key.

Some Roms try to corrupt themselves by writing to memory locations above &8000. This would not affect a Rom but would overwrite the contents of your sideways Ram.

Although only one or two routines are provided with Colin Terrell's unit, they are the most commonly used. The 16K Ram module is easy to fit, easy to use, and cheap, which seems recommended enough.

Jon Revis

SAVE ROM

Which socket to SAVE 0-15 : 3

Enter ROM size A=8k B=16k : B

Enter ROM filename : TOOLKIT

2-Way Sharer

Hardware Micro Peripherals 2-way printer/computer sharer Micro Any with parallel interface Price £22 Supplier Akhter Computer Group, Akhter House, Perry Road, Staple Tye, Harlow, Essex CM18 7PN.

This device is simply a small BBC micro coloured box with three Centronics-type parallel printer connectors on the back and a two way changeover switch on the front. The box contains no active electronics, just a lot of wiring!

The manufacturer claims that it can either be used to connect one computer to either of two printers or to allow two computers to share access to the one printer. As you might expect, it is not possible to connect all three devices at the same time.

In use, you run your normal printer lead from the computer to the box and

then run a cable with a 36-way Centronics-type plug at both ends from the box to the printer - you'll probably have to make up your own as I did. I used 28-way insulation-displacement cable (IDC) and connectors obtained from Maplin Electronic Supplies. This requires no soldering.

At £22 (plus carriage) this device is much cheaper, though simpler, than other such devices. It gives you a choice of whether to have two printers or two computers, depending on your requirements, since it contains no active electronics. Its disadvantage is that it may only be connected to two devices, not that this would bother most home users! I have been using the device to allow my QL to have access to an FX80 and LTR1 printer without having to replug everything all the time.

It has performed faultlessly for several weeks, and has become one of those things I now wonder how I ever managed without.

Name: Steven Crow Bubble Bus programmer

“ I got into programming at school (Turnbridge Wells Grammar), about five years ago, where I took up computer studies. The school had Research Machines, mainly 380Zs, which, though limited in memory, were quite adequate for those days. After that I really got interested and bought a ZX 81 on which I learned programming.

Soon after, of course, the Spectrum came out and I bought that. It was pretty easy to adapt to the Spectrum, and I was soon writing Basic games, although they weren't all that good.

I soon learnt machine code as a natural progression and programmed my first commercial game, which was *Factory Breakout*.

With my next game, *Wizards Lair*, I approached Bubble Bus, who were based locally. It was accepted on the spot and I've been with the company ever since.

I now develop my games on an Einstein, which I download all the code,

through the old RS232 into the Spectrum. But I create all my graphics on the Spectrum, using a pencil and lots of plotting paper.

My games are usually converted to other machines, and I hope to convert *Starquake* for the new Sinclair 128. The game will just take advantage of the larger memory and the sound, as really the machine is just a Spectrum with larger memory.

I have an enormous admiration for Ultimate which has done a lot for the Spectrum, and really my programs are a compliment to theirs, but my next game will be a bit more original.

My favourite computer game is *Knight Lore*, because it was unique, and has fantastic humour.

The greatest thing I've ever achieved in my programming is getting people to like the games I make! At the moment I am happy where I am, but in the future I hope to develop software so that it has more depth, and a greater adventuring role.

”

Name: Steven Crow

Age: 20

Favourite Programs:

Missile Command, Defender, Knight Lore. I like *Missile Command* because of the quick reactions that you need to play the game.

Favourite Machines:

The Spectrum, but these new spate of machines such as the Atari ST and Amiga look astounding. For entertainment, I'd go for the Spectrum, and best all round purposes would go to the Amstrad 6128.

Softography:

Factory Breakout, Wizards Lair, Starquake.

Hobbies:

I like cycling a lot, and swimming, but I don't really have much time. I suppose you could say that I enjoy my work and treat it as a hobby.

HiSoft Pascal80
1001 £39.95

HiSoft Catalog is the ideal utility for owners of CPM machines like the Amstrad CPC range (with discs) and the PCW8256. It allows you to keep track of all your files spread across numerous discs, with date-stamping for each disc.

Catalog lets you find each occurrence of a file or group of files, it allows you to delete and rename files and it provides handy information such as the number of records in each file.

Catalog lets you give discs multi-character labels, with a full description of each disc's usage. All your floppy discs - even your hard discs - may be maintained and kept manageable with this new program.

HiSoft programmers use it all the time to locate up-to-date versions of compilers and so on. You'll find Catalog just as useful, whether you're a programmer, a database manager, a journalist or even a manic games-player. If you have lots of discs you need HiSoft's Catalog.

All this on 3" disc for your Amstrad computer running CPM 2.2 or CPM Plus and for almost any Z80 CPM machine - please call or write to check availability of Catalog in your disc format.

Catalog is only £14.95

Organise your
Discs with the
latest tool from
HiSoft
Catalog

HiSoft C++
1003 £39.95

HiSoft Devpac80
1002 £39.95

HiSoft sells a wide variety of programming languages and tools for most computers - all the Amstrad computers, the ZX Spectrum, MSX, CPM and many more. For details of the programs advertised here and the rest of our range, please write or call.

HiSoft Pascal is an almost complete implementation of the Jensen/Wirth standard Pascal and, like all our compilers, produces pure Z80 machine code as its output. HiSoft's supreme C compiler runs on every popular Z80 computer and provides just about all the features of C detailed in the Kernighan & Ritchie bible (except floats).

Dexpac is HiSoft's Zilog-standard Z80 macro assembler and debugging package, adopted by many computer manufacturers as their official machine-code development tool.

HiSoft also supplies The Cell Basic compiler for ZX Spectrum and TurboBASIC for Amstrad CPC464, CPC664 and CPC6128 owners.

We accept Access and Visa cards and are happy to take written or telephone orders. Each product we sell comes with complete documentation, is guaranteed for life and is fully supported by our highly-trained technical staff. All orders are despatched by first-class post. Please don't forget to say what product you want and which machine it is for. Please call for export and trade prices.

HiSoft 180 High Street North Dunstable LU6 1AT
Telephone (0582) 696421

COULD YOU BE THE NEXT IN LINE FOR SUCCESS?

DAVID JONES

A wild imagination and more than a little eccentricity have enabled David to create such games as FINDERS KEEPERS and the brilliant SPELLBOUND

ED HICKMAN

Ed's a whizz on the Amstrad MSX and Spectrum. A fast worker who always comes up with too clean product on time ... if not before!

?

?

ROD HUBBARD

The inevitable museeum for the Commodore 64. I have the best working relationship with Mastertronic, they've really put their act together and gave me my first chance to do a music program. They treat all their programmers with respect.

STEPHEN CURTIS

The author of games such as SOUL OF A ROBOT and NIGHTMAREQUEUS - the unpredictable one with more a thousand screens. He works hard and fast and has recently joined us in the office to become our Technical Advisor.

Mastertronic, the UK's leading computer games company, is looking for new talent. We're searching for people who are not just experienced machine code operators but world-class programmers as well.

Who can join our highly creative and innovative team.

People who aim to be the latest on a distinguished list of highly acclaimed, highly paid Mastertronic programme creators - originating games that will be sold through our worldwide distribution network to no less than 18 countries.

If you think you can meet the challenge, contact us now for more details.

You could become the Mastertronic success story of 1986.

Power to the chip

David Lawrence and Mark England step out from the software to look at the implications of the ST's 68000 chip

Much of the power of the ST resides in the Motorola MC68000 processor chip which has fast become almost an industry standard for the new generation of super-micros. Part of the reason for this, as with every successful chip, is one of fashion.

There is no doubt that the 68000 has become the fashionable chip of the current generation. Perhaps, years from now, programmers will look back and wonder why it has kept its hold so long, just as processors like the 8502 have lingered far beyond a decent burial date. For the moment, however, the 68000 is not only a fashionable chip, it is a logical choice for anyone wanting to produce a machine that packs sheer power.

A properly developed 68000 system has sufficient power to be favourably compared with many systems which, in the late 1970s, would have been referred to as "mini-computers". The comparison is a revealing one because in many ways the 68000 was designed specifically to duplicate such systems on a single chip. A typical mini computer system in, for instance, an office environment, would have consisted of a central processor unit and a small number of terminals, each of them capable of running programs separately at the same time.

Each user of one of the normal terminals would have had a password which gave them limited access to the system. The use of the central processor would have allocated time to each user, depending on their priority and the number of people using the system, giving each one's programs a certain percentage of its time - though the speed would be such that they would be unaware that it was concentrating on other users.

Multi-user systems

One terminal, however, would have been defined as that in the supervisor and from this terminal it would be possible to take complete control of the system defining who could do what, allocating memory to one user and not to another, deleting material at will.

So how is this like the 68000? The answer to that is that the 68000 is itself designed to make multi-user systems possible with a single chip. Like almost any chip which is a) fast enough, b) can access enough memory, c) is capable of recognising enough special states which need immediate attention (interrupts or "exceptions" in 68000 parlance), the 68000 can be used to execute several different programs, each performing different tasks, all at the same time.

The 68000 has in addition, however,

two different modes; user mode and supervisor mode. Most programs are executed in user mode and in this mode the program has only limited access to the chip. Supervisor mode gives much fuller access to the chip and a system can be constructed around a single 68000 with several users and a supervisor with overall control.

Even on a single user ST, certain areas of memory can only be accessed in supervisor mode, thus protecting the system from corruption by the software which is currently being run. In addition, programs in 68000 code are always written in what is called "position independent" form, which means that a program can be loaded anywhere in the available memory and can be expected to work - even if another program is located somewhere else.

How does this relate to the individual user of an ST? In fact it is more important than might be thought, since the ST is always multi-tasking, even though it might not be obvious to an observer. The desk accessories - little extras like the calculator and snapshot facility - are in fact constantly being run. In most

cases this is only to find out whether the user is trying to access one of them - which is why they can be run during the course of any properly set up Gem program.

Quite apart from this, the sheer complexity of the Gem system is such that even within itself, it is constantly running a variety of parallel tasks. And perhaps the most important factor is that even if the user is never really aware of the many different levels at which the system is working, is still extremely fast.

Increase in power

The speed of the ST is based on several factors. The most important of them is that unlike the 8-bit chips like the Z80 or the 8502, on which most previous inexpensive micros were based, the 68000 sends out and receives data to be worked on in chunks of 32 bits. One of the major limitations on the speed of a chip is the rate at which data can come in and go out, so doubling the number of bits which can be handled simultaneously leads to a multiplication in speed.

This is not the only way that the chip cuts down the log-jam of communication. As compared to most other CPUs, the 68000 saves time by separating the systems which communicate with the outside world and those which handle material inside the chip. If there are several instructions waiting outside the chip while an operation is being carried out

The ST is really a multi-tasking machine

within it, the input/output system allows up to two instructions into the chip which are stacked up ready for immediate use when the main part of the processor is ready for more.

Once inside the chip, data is handled at a faster rate than on previous mass-production chips. Chips like the Z80 are capable of carrying out four million of their most basic operations every second, while the 68000 can run at a rate of more than eight million cycles every second.

The differences do not end there, however. The 68000 is not simply a 16-bit chip, it is described as a 16/32-bit chip. The reason for this is that while the 68000 communicates with the outside world in "words" of 16 bits, inside the chip it works with values of up to 32 bits. What this means is that far less manipulation needs to be carried out when working on values which may be too big to be fitted into the 8-bit registers of a 6502. Where the 6502 may need to be fed an item in four separate steps, the 68000 can handle it whole.

The 68000 possesses no less than 17 internal storage locations, though only 16 can be used at any one time, eight for data and nine for addresses (eight at any one time). This again represents not merely an increase in power but a saving in time, since many operations which require several values can be carried

out instantaneously rather than having to bring material in from storage places in external memory.

It's not limited to speed, however. It scores massively over most other chips in being able to recognise a full 256 different "exceptions" or "interrupts" as they are normally known. These are demands for action which override the normal execution of a program while a pressing task is carried out. Some tasks such as accepting information from a disc drive which require regular incrementing of a value somewhere, simply must be carried out immediately if they are to be of any value.

An urgent task

Every useful chip must be able to recognise when it is being asked to carry out such an urgent function, be able to suspend the execution of the current program and then find the instructions for the urgent task. A chip like the popular 6502 can recognise only three different interrupts and so when an interrupt is requested the chip has to survey the whole of the system asking individual devices if they need attention. The 68000, placed in charge of a system of normal complexity, will have no difficulty in identifying exactly where the request has come from.

The final way in which the 68000 scores over the host of less able chips is

in the amount of memory it is capable of addressing. Having described the 68000 as a 16/32 bit chip, the description has to be slightly modified since the address bus, the channel of communication through which the chip specifies the memory address it wishes to access, is 24 bits wide, allowing the 68000 to access 16,777,216 bytes of memory compared to the 65,536 of a normal 8-bit chip. The 512K of memory of the standard ST system is only a small fraction of the 68000's potential.

The penalty for this power is that the 68000 is relatively complex a program compared to a simpler chip like the 6502, or even the Z80. Perhaps it would be better to say that it is cumbersome, since while the individual instructions the chip can act upon are quite simple there are 57,341 of them.

The sheer speed of the 68000 means, however, that most programming on new machines like the ST is being done in slightly slower but more amenable languages such as the current favourite, C.

None of this sophistication, of course, makes any difference to the way an individual user interacts with the ST, but perhaps it might increase their satisfaction to know how many computer professionals, a few years ago, could only dream of possessing the power that the 68000 places at their fingertips.

DENFORD CAD/CAM ON BBC COMPUTERS

Denford EASICAD — a 2-D draughting package for Acorn BBC 'B' or 'B+' micros, comes complete with expansion ram and rollerball, with option hardware — digitising tablets, plotters, printers.

Gives most major features of powerful mini and mainframe CAD/CAM systems such as, A4 to A0 drawing size, filleting, hatching, auto dimensioning, text, zoom, symbols and area (drag, mirror, rotate).

**UNBELIEVABLY,
ONLY
£495.00**

Send £4 cheque or P.O. for demo disc (free to bona fide educational establishments).

Now available, Denford EASICAM allowing pre-designed components from EASICAD to be downloaded and manufactured on your CNC machine tool.

Also, at only £80 — EASIDRAW, a versatile easy-to-use drawing package (disc or tape). Menu driven, with trackerball and Icon Art software.

Tense time

Program *Quake Minus 1 Micro Spectrum* Price £9.95
Supplier Beyond, Wellington House, St Martin's Lane, London.

From the moment the stunning title page bursts onto the screen complete with suitably tense soundtrack, it's atmosphere all the way with this race against time, rogue computers, automated mobiles and an ultimate earthquake.

Mike (*Lords of Midnight*) Singleton, with Warren Foulkes has created a game which is unique and oozes class and professionalism.

The scenario concerns a terror organisation called the Robot Liberation Front who have sabotaged a huge power station under the Atlantic ocean run by computers. If the R.L.F. succeed the reprogrammed computers will destroy the world. Government scientists have managed to salvage one computer - called Hermes. Your mission is to capture or destroy the remaining four, inside ten hours.

The whole game is played by joystick using icons for commands. It is worth just playing around and getting killed quite often just to work-out the screen layout which is very complicated - there's so much to look at. You are in command of a mobile, controlled via Hermes, and see the complex in 3D through the view screen. The mobile travels through the complex shooting renegade mobiles controlled by the sabotaged computers. Unfortunately they shoot back and you will find yourself failing many times before achieving anything.

Explosions are nicely animated, in fact, the graphics are very impressive throughout. I particularly enjoyed the scrolling effect as I travelled along the road which definitely achieved a feeling of speed and urgency. Will I save the world? Only time will tell - now let me call up the map and try to avoid getting ambushed again.

Andy Moss

Deep rift

Program *Koronis Rift Micro Commodore 64* Price £9.95
Supplier Activision, 15 Harley House, Marylebone Rd, London NW1.

This is the third Lucas film release following hot on the heels of *Rescue on Fractalus* and *Ballblazer* and it's the best one so far. Using the same fractal graphic techniques *Rift* places you in the pilot's seat of your scoutcraft in the

guise of a Techno Scavenger (a sort of interstellar *Stepies* and *Son*).

There you are travelling through empty space when your systems pick up a planet cut by deep rifts. Could this be the legendary planet Koronis? - fabled dream of Techno Scavengers throughout the Universe - the place where the most sought after weapon systems are hidden? Well, of course it is, so with the help of your beautifully animated science droid Psytek you descend to the surface and begin to explore the 20 mountainous rifts hop-

ing to loot the many abandoned hulks found there of their treasures.

The 3D view from your scoutcraft is tremendously effective giving a real sense of a desolate landscape, although the sound is nothing much to speak of. After finding a few hulks and looting them and zapping guardian saucers which are hell bent on destroying you, it's back up to the ship for Psytek to give you finds a quick once over - these can then be either dismantled for sale later or installed in your craft to improve your weapon systems.

Your final objective (to claim the planet) is to destroy the guardian saucer base in Rift 20. Not an easy task, and one which requires you to have more sophisticated weapons than you start with.

An excellent game, although a word of warning - in the cassette version each rift has to be loaded separately, as does each visit to your ship so a great deal of taping and fiddling is required.

Andy Moss

True champ

Program *Barry McGuigan World Championship Boxing Micro Spectrum* Price £9.95
Supplier Activision UK, 15 Harley House, Marylebone Road, London NW1 5HE.

The changing room was grim. The old 'pugs' were discussing the new contender. The best had all been of a style - an over the head view of animated boxers slugging the guts out of each other. But now Barry McGuigan had arrived.

Activision has rejuvenated the boxing game by eradica-

ting the repetition. A near role-playing aspect has been added as you customise your champ and train him to his peak. Training is a question of allocating the time until the next bout, to either work on weak spots or compensate for them.

The day of the fight and the action is seen sideways on. Both boxers' footwork is governed by the style chosen, but your joystick governs the punches. Whether Fire is pushed or not controls the length of the blow. After a few knockouts you'll climb the table to eventually fight McGuigan himself.

This is far more involving than previous boxing games

because it contains more and hasn't sacrificed animation. My only grumble is the absence of a Save Boxer option which really should have been included.

But there is a two player game and the menus are so simple to use.

John Minson

Air bourne

Program *Knight Flight Micro QL* Price £14.95 **Supplier** Realtime Software.

Realtime Software have an written an arcade game (strangely simi-

lar to the classic *Joust*) and jolly good it is too.

You play the part of a Gladiator, who flies on the back of an ostrich, and other gladiators try to knock you off your mount. In retaliation you knock them off their ostriches, and try to capture them before another ostrich can pick them up.

The ostrich has to do a great deal of flapping to become airborne. The task of flapping means a lot of tapping madly at the space bar. The game has an excellent 2 player option - with both players on-screen.

Matthew Palmer

Basic base

Program *Ultrabase Micro*
Any Amstrad CPC **Price** £14.95 Tape £17.95 Disc
Supplier Beebugsoft, PO Box 50,
St Albans, Herts.

Despite their revered status amongst BBC owners and very high quality releases for that machine, Beebugsoft have come up with a remarkably average and unexciting database for the Amstrad. It's quite a workmanlike program and

easy to use and I daresay that many people will appreciate it purely on that basis; however, if your requirements are ambitious or sophisticated you would do well to look elsewhere.

It is a fixed field database; before entering data you have to specify how much room to allocate for each particular category, which can be either restrictive or wasteful on memory space.

There is a limit of 28 characters maximum for each field and of 2000 data items, eg, 200 records of 10 fields, 100 records of 20 fields, etc.

Screen output is in a rigid and predefined form and although printer width can be altered and labels produced, there is no real formatting or report generating options.

Still, if your requirements do not exceed these features, then you will find it able to perform all the necessary functions of a database, sort in order, search the file for given entries - including strings held anywhere within a given field, display and edit selected fields.

Tony Kandle

War!

Program *The War Game Micro*
Spectrum **Price** £7.95
Supplier Reelax Games, 24B
Cowbridge Road, Ponyclun,
Mid Glamorgan.

The War Game is set in the Horse-and-Musket period of warfare, that is the 17-19th centuries. It can be played solo against the computer, or against a human opponent.

In the solo version, several choices have to be made to start with: the number of enemy units can be decided as well as their morals (thus affecting their performance in the coming battle) and the terrain that the armies will meet on - plain, rivers or forest.

Now the player places his HQ and forces on the map. Under his command is an army consisting of infantry, cavalry, artillery and engineer units. The enemy (or computer in this case) has a similar army, but more of everything, unfortunately! The aim of each side is to capture the enemy HQ.

The two-player version is a little more complicated, as neither player can see the initial deployment of the other (as long as you are good, and turn away while the deployment takes place!). In either version, the decision to attack the enemy displays a window at the bottom of the screen with the opposing forces depicted as little stickmen: once the skirmish is entered, you can sit back while cannonball and shot fly back and forth.

The War Game is certainly no simulation of a real event, and certainly no war game in the traditional sense, witness the total destruction of retreating units. One of the major drawbacks has to be the fact that forces cannot attack if on a diagonal.

Despite several inconsistencies in both manual and program (the computer's forces can sometimes get confused and oscillate between two buildings *ad infinitum* while you creep on), I spent many a long hour at it.

Tony Bridge

Romeo

Program *Gladiator Micro*
Spectrum **Price** £7.95 Supplier Domark, 204 Worple Road,
London SW20 8PN.

Glad to be a gladiator? Well, it's your only chance of winning your freedom from slavery so strap on the armour, grab a sword and get down into the arena where the emperor will decide your fate.

Yet again, Domark are going for the bloody and fans of the company will be glad to know that despite the much improved graphics on this one, they've managed to match their previous standards as far as play goes.

It's 56 AD - which means you've overslept - and you control a little figure in a battle for life and death. The animation of the sprite is impressive and if you follow the instructions and go to the gambling mode to watch a demo bout you'll probably have the blood lust upon you.

There's a good choice of weapons to select first, but providing you don't do something silly, like taking two shields, I'm not sure your choice makes so much difference. It's during practice that you're likely to realise that controlling your Ram-based Roman is less than easy.

Into the arena and the com-

puter controls the champions. During your brief life you'll realise just what a great idea it was to have so many moves and just what a hopeless one it was to access a third of them with two presses on the fire button, meaning time and time again an attempt to throw a weapon will result in its one press equivalent - move back, leg defence. And think how you'll laugh when you mean to attack that psychopath's legs and instead swap your shield into your sword hand!

There's a minimum of 14 fights before you meet the emperor's champion and then you have to gamble on following bouts until you raise the ante to buy your freedom. Frankly, I think I'll return to mucking out the imperial dung heap.

John Minson

Time saver?

Program *JOSS Micro OL*
Price £15 Supplier WD Software, Hiltop, St Mary, Jersey, C.I.

JOSS (an acronym for Joystick Operated Software System) is claimed to be a time-saving utility which allows various options such as loading and running programs, copying and deleting files, and formatting new media, to be selected via a joystick or the arrow keys in conjunction with the fire-button or space bar.

The program loads and

runs automatically when the machine is booted, and displays a rather cluttered screen divided into about 10 regions, differentiated by colour. The first 18 file names are displayed in a large window on the left of the screen, with a blinking arrow pointing at the topmost file name.

A blinking cross-shaped cursor then has to be moved to a region of the screen containing "pointer down up", to move the pointer up or down with the space key. I found this use of both a pointer and a cursor somewhat confusing.

JOSS is obviously compiled, and on examination, I discovered it had first been written in SuperBASIC.

When I tried to load an EXECable file, I was dumped out of the program, and a similar thing happened if the cursor was placed over "Do current option", and the space bar pressed. Better error-trapping is needed. Several SuperBASIC utility programs are provided. These are amateurishly coded, with little error-trapping.

I don't really see the need for this package. Simple menu-driven programs, which are just as fast and easier to use, could probably be written by most users themselves.

Leon Heller

By N Outram

The game has four levels and five pressures per level, the molecules are moved by a machine code program to speed things up. Your man is moved

You might like to try altering the graphics for the molecules; these 16 bytes are held at line 1000. The 'Atom Man' bytes and dust bytes are held at line 1010.

400-450 Escaped routine, includes Mad Molecules, update score, level and pressure.

1700-1770 This routine sets up the data for each molecule for use by machine code routine at 31000.

F Level number (1-4).
S Sound on/off indicator,
O = Off, 1 = On.

COMPUTER GRAPHICS DESIGNER

We have an immediate requirement for a graphics designer with artistic flair and a strong interest in home computers. Responsibilities will include the support of a range of projects, designing both static and dynamic graphics of high quality. Applicants should be able to demonstrate a good understanding of graphics design, with a portfolio of previous work if possible.

PROGRAMMERS

Several vacancies exist for proficient machine code programmers with an extensive knowledge of Z80, 6502 & 68000 assembly language experience. A knowledge of C would be an advantage. Applicants should hold qualifications of HNC or degree level or have equivalent experience. Creative talent, self-motivation, and a strong interest in home computers are essential.

We offer highly competitive salaries, according to experience. Excellent working conditions.

BASE CONVERSION

by Margaret Mair

On being asked repeatedly for advice by schoolchildren doing homework on numbers and base conversion, I decided (for my benefit) to write a program to facilitate checking the accuracy of the homework. Most conversions need to convert the number in the first base to that of base 10 and then convert the number in base 10 to that of the second base.

This program works out the number in the new base in one pass. It, first of all, makes sure that the number entered is in decimal form because an entry is allowed to be made in hex notation. Two spaces in the string are allocated to each digit because numbers in a base greater than 10 will need two spaces for each

digit. For example, a number like 8208 in base 65 means that the first digit is 82 and the second one is 5.

Successive division of the number held in the string by the second base takes place until that number is zero. All the remainders are collected and this gives the answer.

Because strings on the QL can be of great length the number to be converted and the number in the new base can be quite long. Since two spaces are allowed for each digit then any base from two to 99 can be accommodated.

The numbers entered must occupy two spaces for each digit of a number in a base greater than 10, but only one space for a base of 10 or less.

```

```

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE.** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS.** Not just SCOREDRAWS, but ALWAYS HOMES AND NO SCORES.
- **SUCCESSFUL.** SELECT guarantees that Poolswinner performs significantly better than chance.
- **ADAPTABLE.** Probabilities are given on every frame - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY.** All team names are in the program. Simply type in the reference numbers from the screen, or use **FIXGEN** to produce future lists automatically (see below).
- **DISC/MICROPRINT COMPATIBLE.** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT.** Full hard copy printout of the data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 30 (+16K), AMSTRAD, BBC B, Atari (48K), ZX1 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

FIXGEN 85/6 AT LAST! No more struggling for hours to get the future data into the computer. **FIXGEN** has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full future data is generated in seconds. Fully compatible with Poolswinner. **POOLSWINNER WITH FIXGEN £15.00 (all inclusive)**

COURSEWINNER V3

THE PIONEER COMPUTER PROGRAM
You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. It outputs most likely winners, good long odds, forecasts, places etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC B, AMSTRAD, Atari (48K), Apple II, PRICE £15.00 (all inclusive) includes The AND National Street telephone.

UNDER THE MORTUARY

by Sunil Jagota

This is a cartoonesque Arcade/Adventure game written for the BBC micro Model B (O.S. 1.2). In *Under The Mortuary* you must guide Sonny, the Bombay Duck who is trapped under a mortuary, to safety. To do this Sonny has to overcome many of the hazards, traps and tests set for him and reach the exit, which is in the form of a door. There are 28 different rooms to explore, and each one is infested with different opponents.

Scattered about in the 28 rooms are collapsing walls, spiders, ghouls, chained fireballs, super ghouls, stakes,

coffins, prickles, keys, bombs, mind shakers and of course the door! A tune constantly plays in the background. To play this game, you will have to find out how to use or avoid the various objects or opponents you encounter. You will find that the stakes and the mind shakers will be used most often.

It may take you some time to master the controls, they are : = UP, / = DOWN, Z = LEFT, X = RIGHT. It may be useful to make the bird stop motionless, to do this it has to collide with a wall.

This week we give you the two short

programs that form the hex loader and game introduction respectively. Finally type in Fig 3, the instruction program, and Save it onto a BLANK tape. Leave the tape positioned after Fig 3. Now type in Fig 1 - the hexadecimal loader and Save it. Next week we will begin to print the mammoth hex listing.

If you don't feel like typing in the program, simply send me £4 and I will send it to you on tape. Sunil Jagots, 69 Coutts Rd., Walkergate, Newcastle-upon-Tyne NE6 4RA

The Rogue Program

PRINTING MODES

by Glen Counsell

There's a Firmware Indirection in the Ram of the 484, which intercepts characters on their way to the printer. This allows you to use a machine code routine to take a look at the characters, as they speed by, and respond to particular ones by having them trigger another routine which can send new Escape sequences to the printer. This means, in effect, that you can cue your text to change the printing modes: to use emphasised print, instead of normal, for example.

I have written two short programs (one printed this week, the other next week), which make use of this trick. The first is designed for use when you are Listing a Basic program. It recognises a Rem statement on a line and prints anything that comes after the Rem in emphasised type. This means that your comments in a program show up clearly and help to make the program easily understandable. You can see how effective it can be if you look at the Basic program below, which was reproduced with the help of this utility.

Program two (next week) allows you

to cue for double-width printing (useful for headings), or lets you underline words, or sections of text. It can be used with the *Easi-Amword* word-processing program, which is bundled with most 484s, as well as in other situations where you would want to output text to a printer.

The actual routines have to be in machine code, but I have put them into short Basic programs, which will enter the code into the computer's memory for you. Once you have done this, you can forget the Basic programs and Save each piece of machine code, by itself, for future use, with *Save 'Listmark',B,(your address),150* (this week) and *Save 'Printer',B,(your address),100*.

One of the attractions of the routines is that you can Load them anywhere (well, anywhere sensible) in Ram. You put them in action - plug them in, as it were - by Calling the address you loaded them to. Each routine checks to find the address at which it is located and then sets itself up accordingly. It is what is known as fully re-locatable. You 'unplug' the routines by Calling the address you

Loaded to +2.

My printer uses Epson compatible codes and the ESC sequences have been chosen to fit it. Your printer may use different codes and you will want to check them in your instruction book. You may also want different kinds of type emphasis, which would require different codes. In this program, I have allowed space for five different codes: this would let you use a combination of sequences - italic and underline, or condensed, or whatever.

The only thing to remember is that you must have exactly five codes, or the program will crash. You must pad out with "0"s (as I have done), if you use less than five (lines 900-920).

I ought to point out a limitation in using the Rem program. To save space, I have not made the program check for context, when it finds a Rem. This means that if you use a word like "Remark" in your program - or even "FIREMAN" - funny things will happen! However, remember: "Remark" and "Fireman" (and even "remember") are perfectly OK.

Next week, the printer and program.

INTERRUPT

by Eric Deghaye

Last week we saw how an interrupt could be used to control the consequences of pressing a key. This week we consider how to control the sound chip of the Commodore 64 with interrupts.

One of the gimmicks sometimes implemented on machines such as an IBM PC is a keyboard that makes a faint 'bleep' whenever a key is pressed. This can be useful if you want to 'hear' whenever a key has been correctly pressed.

Implementing such a feature on the Commodore 64, now that we know more about how the interrupts work, should not be too difficult.

Briefly, the Commodore has a purpose built sound chip that can be programmed by poking values into some memory locations. These correspond to the characteristics of the sound to be produced. Unlike a piano keyboard

where the sound will gradually die away after a key has been pressed, the chip in the Commodore has its sound channel either on or off. Which means that you have to switch it on and off yourself.

The following instructions are sound parameters for the sound chip - their meaning is described in the program listing. What we are doing here is to initialise the sound chip with the parameters of our sound.

Then comes the interrupt driven routine. What has to happen first is checking whether a key is currently being pressed. This is achieved by looking at the content of the memory location \$C5. If we read a value of 64, this means that no key is currently pressed. Any other value is the ASCII of the key pressed. So if the value read is 64, we can exit the routine.

If the value is any different, the sound

generation procedure is started.

The sound is switched on by putting the value 33 at the address base + 4 (find out for yourself the reason for these values), then a delay is created with a countdown on the content of x, leaving the sound switched on finally followed by putting the value 32 in base + 4 which switches the sound off. Control is then given back to the normal interrupt routine.

For a longer 'bleep', change the value loaded in x at Line 700. The bigger the value, the longer the bleep (because the longer the delay before the sound channel is switched off). You also might find it interesting to play with the sound chip parameters. Try, for example, to make a musical keyboard, ie, change the pitch of the sound produced according to the ASCII of the key pressed. The results are hilarious...

Wicked traps

Tom Goldie of Airdrie has sent in a poke for those Spectrum owners who are suffering the wicked traps of Gargoyle's excellent *Sweevo's World*. To get 256 lives insert: *Poke* 37008, 255 into the Basic header before the *Randomise* *Use* statement.

For Amstrad owners here is a routine from Alan Milner of Godalming to get infinite lives on Mastertronic's *Caves of Doom*. Replace the existing header with this:

10 Memory 5240
20 Load "", 5320
30 Poke &2525, 255
40 Call 5320

He also recommends using the cursor keys for slow movement and the joystick to travel quickly.

Robert Gooding of Irvine has written with some Dragon tips. First of all for Microdeal's *Dark Pit*.

"There is a bug or some sadistic humour in here on the screen which says 'which way?' If you go up you are trapped behind a monster and another door traps you with an untested copy of your last move. The only way out in either case is to have plasma ray to shoot the offending object.

"In Incentive's *Eddie Steady Go*, by typing *Fiddle* and pressing the left or right arrows you can go through all of the screens. Unfortunately there are no extra lives to be gained."

Thanks a lot, Robert and I'm sorry there aren't many Dragon tips in the Avenue, but as I've said many times it depends entirely on how much our readers contribute.

On now with our *Dragonarc* solution. We left you in the start of...

Sanctuary

This has already been found by a winged demon and his company of goblins. Kill them with "Missile". Use "Mantle" to protect against demon's missiles.

If you walk into the "cursed" scroll you are transported to a doorless cell.

Use the keyrod ■ find an exit cube. Uncurse the scroll with the sword to get the message "The vault of Locris is opened by the *Sunkey*", ie, it is that you are looking for.

One of the goblins has the *Sunkey*. Another goblin has a green chest key. This opens three green chests. In dark room use *Light*. You will find a wand in one of these that is "cursed": use sword to uncurse it. Take the wand and the message "I can find what I hid where it is blackest" will appear.

Use the sword on magic spiders to get spells.

Unlock green chest with green key to get the message "One leads to a gate through the other locate". This is meant to be read in conjunction with the message on the *Locate* spell already found by the winged demon. "Two doors side by side, what can they hide".

In other words look for two doors side by side - one leads to a gate, ie, the exit cube and the other one is an empty room. Use *Locate* in here to find another green chest unlocked by the green key.

Take *Cursed Key* to the cursed crypt and the message "One lost, one in ruins, one in hell, one cursed" will appear which reveals where the crowns are:

Lost - (Vaults of Locris)
Ruins - (of Canti)

Sweevo's Word from Gargoyle Games

Hell - (Hellmouth)
Cursed - (Cursed Crypt)

This is also the order in which they must be destroyed.

To get to the two doors, two door keys have to be found. The first is hidden "where ■ is blackest": ie, in a black room. Use *Light* then search with the wand. The key is under a stone carving on the back wall. Also search the tomb with servant for *Wall* spell. Kill wraith with *Bane*.

Use door key to enter locked room by goblins (near start). Inside another green chest is opened by the green key. Leave the old door key and take the new

one from the chest. Proceed through the dark room to the locked door and open it with the key. Through this are the "doors side by side".

Through the door use full moon and *sunkey* to reveal gate and cube. Leave with *Sunkey*, *Cursed Key*. Proceed ■ Locris for the second time.

Open the locked door with *sunkey*. Search tomb with the servant for *Undo* spell. Avoid the fireballs in the small room. Use *Bane* to kill the wraith. Use *Undo* to remove the curse on the doorway that takes you to the spider room. A moon symbol appears but it does not do anything. It is merely the curse made visible.

Enter the crown room. Use *Undo* to release crown and take.

Proceed to Halgar's tomb using *Return* and place the crown on anvil. (Take gold remnants for trading).

Ruins of the Canti

This is inhabited by dwarves who throw axes. *Wall* makes you invulnerable to these. They will get friendly if you give them things. (But the elf may kill them anyway).

Use elf to attack if you wish, wither strategy can be used.

Find the squirrel - use him to search the leaves to find the stone and torch. Light the torch on the campfire. Take the

bow to the elf who will give you a nut. Give this to the squirrel to crack. Take the key.

Enter the ruins with the elf. Unlock the chest with the key to get S symbol. Use this to move flagstone to get *Demon* spell and to move the flagstone in the woods to reveal an entrance.

A message says "To return take snake and fire you must make", ie, take the symbol and light the torch.

Go down. Go through door.

Switch off snake generator with fire. (Place the torch on the 'S' symbol on wall). Kill the snakes with the 'S' symbol. (Use the *Slow* spell if necessary but sparingly as you must have it in the Citadel).

Open doors with the 'S' symbol. Kill snakes with the torch. Open chest with 'S' symbol. (Always leave the torch on the floor in case snakes appear).

Take out the crown symbol or sometimes an S symbol. (If ■ is an ■ symbol place them together to make a crown symbol). This ■ not a bug, it just usually happens in the chest when you cannot see it.

Tony Kendall

Tony Bridge's Adventure Corner

Major bugs

Sorderon's Shadow is an adventure that I have yet to see - but John Rundle has and he's not too happy with it.

'I think that it's full of bugs. Right at the start, Beyond admit that there is a bug in the program. You have to kill a Krillan for Lonar, but he doesn't tell you this. After killing the Krillan you must return to the village and Lonar will say 'Well done, you are now one of us'. Well, he doesn't, so there are two bugs before you have really got started.

'If you are going North and you come to a hut and then type 'enter hut', you are told that there is no hut in sight. Type 'Go North' and you are in the hut. Now type 'enter hut' and you are told that you open the door and enter the hut. Nothing on the screen changes, however. You can take water even though you have nothing in which to carry it, but you find that you can't drink the water. If you get killed off, the game freezes and none of the keys seem to work. Actually, the program is waiting for you to load in a save position, but this is not made clear in the instructions.'

I hope that another reader can throw light on the bugs mentioned by John (who I know is an avid adventurer and not usually given to winging about the failings of a program): documentation is an important part of a program, I feel, and if someone has forked out several pounds for an adventure, then he or she is entitled to decent instructions - in fact, well-written instructions can make or break a game.

While we're speaking of bugs, *Never Ending Story* from Ocean seems to have

bought its fair share of disgruntled moans. The bug here is encountered in the Spectrum version if the player attempts to head into the swamp accompanied by Artax the Horse. The program then crashes. Ocean, upon being contacted by victims, admits that there is a problem which has now been corrected. They will, of course, exchange any faulty tape.

But they also say that Artax is not necessary in the solution of the adventure, and urge players with a duff tape to ignore the Horse and just carry on without him.

I find this incredible - it may well be that Artax can be ignored, but this is surely no excuse for a major bug in a major (and not inexpensive) program such as this! By the way, my Amstrad version doesn't seem to contain this anomaly.

Back in the real world, there are adventurers doing sterling work for the rest of us. Don Macleod has been burning the midnight oil in compiling a database of Adventure Corners. He offers this index to other readers - they should own a C64 and disc drive to benefit. Send Don a blank disc and postage for a copy.

If you want the program that will create and update the database, then that

wrote, asking for help in Melbourne House's *Classic Adventure*. My experience of the classic has been via the original and Level 9's version, so I wasn't able to answer her questions about The Pirate with authority.

Jim O'Keefe has come to the rescue: 'There is no Pirate in MH's version, though there is a Pirate's Chest which is treasure in its own right and must be collected. To find the Chest, start at the West end of the Hall of Mists, go south to enter the Maze, then E, S, S, N, E, N, E, NW. The Chest will be found in a Dead End. To return, go SE, N, W, W, Up, E, E, W, Up.

'By the way, the chest can't be opened as in other versions, it's just another treasure to be deposited at the start of the game.'

There's another major difference between MH's version and others: 'The Vending Machine seems to serve no purpose. It's in another maze, like the original, and has a sign next to it reading 'Drop coins for new batteries'. You can drop coins, but nothing happens: the machine doesn't work and doesn't need to, as you don't need new batteries. In fact, your lamp never grows dim.'

Any comments that I've made in the past about *Classic Adventure* have been gleaned from the other versions: I hope that MH owners haven't been unduly diverted by these anomalies.

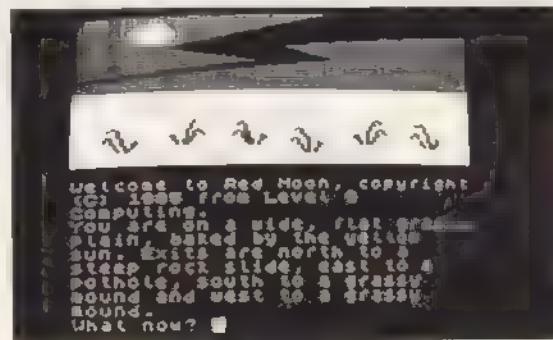

For those who want to form a little 'MH Classic Adventurers Club', write to Jim at 28 Sable Close, Beaver Estate, Hounslow, Middlesex TW4 7PE.

He can also offer help in the Gar-goyle collection of *Dun Durach* and *Tir Na Nog*.

Finally, a little routine for Amstrad

owners who would like to see the list of words available in Level 9's *Red Moon* and *Return to Eden*. Adam Milner of Cranleigh in Surrey has worked this one out:

```
10 MODE 2: MEMORY &2FFF: LOAD
  "BIT1" [for Red Moon] "FIRST BIT"
  [for Return to Eden]
20 FOR A = 74800 TO &4F61 [for Red
  Moon]
  FOR A = &3362 TO &399D [for Return
  to Eden]
30 IF PEEK(A) > 90 OR PEEK(A),65 THEN
  GOTO 60
40 PRINT CHR$(PEEK(A));
50 NEXT
60 IF PEEK(A) = 128 OR PEEK(A) < 193
  THEN PRINT "": GOTO 50 ELSE Q =
  PEEK(A):PRINT CHR$(Q-128):GOTO
  50
```

Red Moon from Level 9

will cost £1 with the disc, £3 otherwise. Don Macleod, 35 Old Evanton Road, Dingwall, Ross-shire IV5 9RD.

Are you a Vic adventurer? If so, you may be able to help Vilmore Rochester, who is having trouble in *The Quest* on his Vic-20. As to whether there are other Vic adventures, Vilmore, I'm sure that there must be, but you don't tell me which ones you have.

Maybe if someone writes to you at 18 Llanvanner Road, Peckham, London SE15 2BW, you can exchange information and help.

Back in the summer, Doreen Barton

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember - the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

Winning Phrase No 58: "Team trimmed, Leon's gone", from J Kaneally of Exeter, who wins £25. Honourable mentions go to A Robertson of Leamington for "Ron was dim teenage comrade", and Mrs C Slight of Doncaster for "Downing St create a mole".

Now voting on week 62 = £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude!) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 62 closes at 2pm on Wednesday February 12, 1986. Entries received after that time will not be eligible for inclusion in that week's voting. The judges' decision is final. Only one entry per individual per week will be allowed.

New Releases

IRRITATING?

The problem is that the BBC computer has no real tradition of budget software where games like *Broommaze* can be issued harmlessly without having to be reviewed with the major commercial releases.

Broommaze is a simple maze game in which you collect things and dodge little insects; the insects can be destroyed by remote control bombs you can place at strategic positions and then detonate. The same is true of the maze walls - the mazes are generated randomly and so often you may find that there is no route through without knocking a few holes here and there.

As the levels progress you get different types of baddies and things speed up. There are several games *Broommaze* reminds me of, not least something put out on the Spectrum a while back called *Eric and the Floaters*.

It's nothing technically, though it could be said to have a certain kind of irritating charm. At £1.99 I'd be kind and say you might get a few hours entertainment out of it, but at £4.95 I'm afraid it's a case of you've got to be kidding.

CUSTOMISED

Doors of Doom is the latest Amstrad game to go out on the Amsoft Gold label - previously distinguished by some of the least impressive titles to be released in a 'mega' range ever.

Doors of Doom is better and for those who enjoy customising games, an essential purchase.

At its simplest *Doors of Doom* is a highly detailed, nicely animated collect and dodge game with big graphics and (for the Amstrad) quite clever sound. The idea is to collect the parts of a magical door whilst battling with various kinds of alien. To help you, there are various objects scattered around like Teleports (gets you to another section of the screen's layout) and, inevitably, a laser.

The real point of the game, though, is that you can completely redesign the scrolling

Pick of the week

PRIVATE EYE

Movie is the latest game released by Ocean under the revitalised Imagine label. *Movie* is about gangsters and mixes *Knight Lore* style 3D animation, with Icon commands and a faintly stylised graphic design. Unlike *Knight Lore*, the playing style of the game is as much puzzle solving as it is dodging obstacles - in this case, rooms full of wandering hoodlums.

Your central character is a Philip Marlow style private eye complete with mac. Your task is to find a girl - Tanya - who can give you the information you need to find a missing tape held in the heavily guarded HQ of Bugs - chief mobster. The problem is that Tanya has a double - her evil sister Vanya - who is in league with Bugs and who will try to ensure your demise. You have to discover who is who.

Rooms are presented in the classic *Knight Lore* format - as though a camera is placed high in the bottom right hand corner.

Control is via a series of Icons which represent Move, Pick up, Drop, Inventory, Throw, Shoot, Punch and most unusual of all, Talk. The Talk option produces a speech bubble on screen into which you can type simple sentences.

It really is a most intriguing and stylish game and in its own quiet way extends yet further the boundaries of what an arcade adventure can be. Excellent and reasonably priced.

layout to your own specifications, using an editor program supplied with the cassette. Although there are a few restrictions about what can be placed where, in general the system is very flexible indeed. It means that the game can be revitalised when the existing format starts to pall.

Not 'the best game you have ever bought for your Amstrad' as it says on the

box, but potentially, if you use it to the full, one of the few Amstrad games to deserve that 'Gold' tag.

VISUAL PUNS

Not having ever found Russ Abbot the slightest bit funny, I greeted *Basildon Bond*, the computer game with less than total enthusiasm. "Oh, my God, it'll be awful" was more like it. Actually, the game is far from awful; it's good even.

The idea is that Basildon Bond, one of Russ Abbot's guises, is charged with rescuing the real Russ in time for his comedy show. Releasing Russ involves finding jokes (awful visual puns mostly) and then logging them into a computer. The computer will respond with an appropriate answer and set another joke.

As ever the heart of the game is picking up the right object at the right time as you hunt around the various rooms of a television studio that forms the playing area. To defeat the occasional nasties like cameras, for example (the cameras in this game have a chaotic indepen-

dence previously revealed only on Breakfast Time), you may call upon the services of Cooper Man who sweeps across the screen. The only problem is that sometimes Cooper Man is replaced by Blunder Woman who, far from clearing the screen of baddies, bops you on the head.

Though quite simple, the graphics are large and neatly reflect the generally humorous approach to the game. The only reason I can't be completely enthusiastic about the game is the price - £9.99 on cassette; that's pushing it when you consider some of the competition in that price bracket. It would have been fine at around £8 or so.

CURIOUS

The *Music System* for the Commodore 64 by Rainbird Software was an astoundingly sophisticated yet very user friendly package that revealed just how powerful the Sid chip could be. Rainbird have produced a similar package for the Amstrad - not highly regarded for its sound properties.

The *Music System* on the Amstrad is a rather curious affair. Though extremely well designed, visually attractive and flexible it, a) has some curious restrictions and b) is limited by a sound chip that

just isn't capable of anything very spectacular. Whereas the Commodore version of the program was professionally viable (just, and in the advanced, Midi version very useful indeed), the Amstrad version is only suitable for fiddling around and maybe, for musical education purposes.

Obviously, that the sound chip isn't capable of much is hardly Rainbird's fault and in a sense it's precisely because so much work has gone into this package and it is so powerful that the sense of 'marvellous but what's the point' is heightened.

The package uses a series of pop down menus and overlays to give you access to everything from basic insertion of notes onto the staff to subtleties of pitch notation, accents, repeats and general control of voice parameters, music files and the like. The music can be entered either by tapping away on the Qwerty keyboard, in real time or actually entering

notes on to the on screen score.

It is easy to use and flexible in all but a few respects, but these odd restrictions are most curious. For example, the tempo is not fine tunable - there are only a set number of options, 16 in total. That may be enough for most purposes but why limit it at all?

Similar things can be said of the sound parameters. There are only seven envelopes available and apparently only one waveform, although you can mix in white noise and change the attack and decay of the volume (which is what most people call the Envelope in the first place). True many of these restrictions are the result of the hardware but, again, the end results are never better than mediocre.

Let's this sounds like a poor review let me be clear, Rainbird have worked wonders with program design and presentation, in that sense the program is excellent, but frankly I don't think the Amstrad's sound facilities merit all the effort. You can argue that the program is an educational tool but in those terms I have seen other, cheaper, packages specifically designed for that purpose, which are more suitable.

Media values

Micro Live's answer to *What's My Line* in the *Which Computer?* show, with Sir Clive, Alan Sugar and Chuck Peddle (designer of the original Commodore Pet) on a panel, answering questions from the audience was unintentionally quite revealing.

On the subject of the QL, Sir Clive commented that he thought his company had rushed into producing a 68000 processor based machine too quickly, without thinking what people would use it for.

He said he was disappointed that the QL had not taken off in the same startling way as the Spectrum, which is what he had hoped when the machine was launched.

The reason for its 'failure' was, he said, because the world wasn't ready for 16-bit machines.

It was fascinating to see Sir Clive make this U-turn. Only a few months earlier the 68000 processor series was being hailed by Sinclair as 'the architecture for the remainder of this decade'. How things change!

In fact, what Sir Clive now says is right in one sense - the QL has undoubtedly failed to live up to expectations. But the

reasons for its disappointing performance have little to do with the Motorola 68000 chip series, or the world's readiness to receive it.

The question at issue here is to do with what the Americans love to call 'media values'. People buy micros primarily for entertainment. By that, I don't just mean games. I mean graphics, programming, music, communications, and so on as well.

But they do buy micros for relaxation, rather than to take their work home with them.

So when you start to look at the machine which will be the next big seller after the Spectrum, and which will eventually take over from it, you have to be looking at enhanced 'media values': a machine with improved graphics, plotting, colour, sound, resolution and the ability to manipulate large blocks of data and put them to the screen very fast.

Now look at the QL. It may well have been based on the 68008 processor, but as a machine it just doesn't deliver. Its graphics handling is awkward and memory expensive, its sound considerably inferior to that of the Commodore 64, and the machine is - at least for doing everything except mathematical calculations - slow.

As a result, much of its software just doesn't look worthy of a new generation machine.

Whether Sir Clive's reasoning that the UK isn't ready for 16-bit is correct or not will shortly be seen.

The Atari 520ST is capable of providing the expected 'media values' (the Amiga even more so, but it's too expensive) and it should soon be available at around the original price of the QL, for just the basic console.

Then we'll see if there is a demand for 16-bit.

My guess would be that there definitely is.

David Kelly

Puzzle No 194

Today is a rather special day for May and her brother David. You see, not only do the digits of Mary's age in reversed order give David's age, but David's age is also equal to Mary's age plus half of Mary's age.

Does all this seem a little confusing?

In fact, given the above information you should be able to work out just how old they are.

Oh yes, one more thing. By 'age' I mean age in days, not years!

Solution to Puzzle 189

The tanks have sides of 17/21 and 37/21 feet. The sum of the cubes of these numbers is equal to six.

```
10 FOR DENOM=11 TO 99
20 FOR N1=10 TO DENOM-1
30 FOR N2=DENOM+1 TO 99
40 LET VOLUME=(N1*N1*N1)
/ (DENOM*DENOM*DENOM)+
(N2*N2*N2) / (DENOM*DENOM
*DENOM)
50 IF VOLUME=6 THEN
PRINT "(";N1;"/";DENOM;")
CUBED + "(";N2;"/";
DENOM;") CUBED =6"
60 NEXT N2
70 NEXT N1
80 NEXT DENOM
```

Note that the denominator (B) is the same in each case. Therefore, we require to find the two numerators such that the sum of the cubes is equal to six. Each component part has a two-digit value. In the case of the two numerators, one has a value of less than the denominator, and one has a value of more, since we are told that the volume of the smaller tank is less than one cubic foot, and, by inference, the larger will therefore be greater than one cubic foot.

Winner of Puzzle No 189

The winner is J Frank Hughes of Denbigh in Clwyd, who will be receiving £10.

Rules

The closing date for puzzle 194 is March 6.
